

MA501t

Mini Audio Amplifier

Applications

- Schools
- Museums
- Retail
- Meeting rooms

Features

- Automatic “on” with 12 – 32v trigger
- Recessed screw adjust input gain
- 30 Hz – 20 kHz frequency response
- 120 Hz high pass switch
- Small size – 1.2” x 3.9” x 8”
- Rugged extruded aluminum housing

A small amp with serious power output, the MA501t offers 25v/70.7v/100v outputs with 50w of mono amplification. It is ideal for localized amplification in distributed audio systems such as rollabout AV carts, museum displays or retail stores. The MA501t can be pole, chassis or rack mounted for maximum flexibility in installation. The amp’s feature set is highly flexible as well. It can be set to automatically activate on signal sensing, or upon a voltage trigger; recessed screw gain adjustment deters tampering with levels.
